COURSE: International Financial Management, FIN 672 On-Line

1. COURSE DESCRIPTION:
This course is designed for individuals seeking careers as consultants, analysts, policy makers, traders, risk managers in multinational corporations and banks, Federal Reserve, central banks, regulatory institutions and international agencies. Theory and practice of international financial management requires understanding of international financial markets, such as FOREX, euro-money, international bond and equity, and currency derivatives. A particular emphasis is placed on exchange rate, its determinants, its relation with other important variables, and the measurement and management of exchange rate risk. The course systematically develops the framework and tools to address the major decision problems encountered in a global setting by the multi-national corporations (MNCs), financial institutions, and global investors.

2. OBJECTIVES OF THE COURSE:
The main objective of this course is to understand how investors, traders, analysts, MNC’s and international financial institutions manage their investment and financing needs in highly integrated and sophisticated global markets. One of the most important problems of global operations is the risk due to changing currency values. Accordingly, the understanding of exchange risk and its management are the most important concerns in the international investment and financing decisions.

- Familiarize students with the international financial environment in which a multinational corporation (MNC), investment and commercial banks, and other financial institutions operate.
- Learn the vocabulary of international finance, and key economic and financial concepts. This involves an understanding of exchange rates and its relationship with other economic variables; of exchange risk and its management.
- Learn the products of foreign exchange markets, Eurocurrency markets, currency forwards, futures, options, swaps, and international bond and equity markets.
3. SUMMARY OF TOPICS COVERED:
   - International financial environment and foreign exchange risk as the main theme.
   - Foreign Exchange Markets, spot, forward, futures, options, and swaps.
   - Exchange rate determination and international no-arbitrage parity conditions
   - International money markets and euro-banking.
   - Foreign exchange exposure and exchange risk management.
   - International diversification and portfolio investment.
   - International Bond and equity markets

4. COMPETENCIES and CONTACT HOURS:

The student will be introduced to:

- The international financial environment in which a multinational corporation and financial institutions operate.

The student will understand:

- foreign exchange rates and risk associated with the volatility of exchange rates
- International financial markets: Foreign exchange markets, Eurocurrency markets, international bond and stock markets, currency options, futures, and swaps.
- Currency exposure and its management by multinational companies.
- Short term international financing and investment decisions
- International Bond market and pricing of foreign and euro bonds

The student will be able to:

- Assess the currency exposure and device strategies to manage it. Students will also be able to take decisions regarding short and long term financing and investment decisions

Total

5. RESOURCES:

Supplements:
- Handouts by the instructor
- The Wall Street Journal
